HISTORY OF KINUGAWA

A relentless commitment to never compromise on product quality.

1955 THE BEGINNING:

The Kinugawa Group began as a sales company named Kinugawa Shoji Co., Ltd. for the "underwater sports equipment" division of Kinugawa Rubber Industries, a company that produced rubber products for major automobile manufacturers. This marked the start of their journey. The company's founder often came up with ideas late at night, which were turned into prototypes by the next morning. This commitment to innovation led to many patents and laid the foundation for the company's approach to product development.

In 1965, the company acquired the Tateishi Factory, set up production lines, and began the manufacturing of underwater goggles and fins. Their mission was to create high-quality, domestically made marine sports equipment, with a strong focus on research and development. In 1967, the company changed its name to Kinugawa Pacific Co., Ltd. The products, which were also exported to the United States, gained a worldwide reputation for quality, and the "Pacific" brand came to earn the trust of customers.

In 1971, Kinugawa Pacific Co., Ltd. introduced the "Mantis," a groundbreaking twin-lens mask designed to fit the Japanese face. At a time when most diving masks were single-lens, the Mantis was designed with meticulous attention to how the mask contours to the face, prioritizing comfort and achieving a better fit for the domestic market.

1980 UPHOLDING VALUES DURING THE DIVING BOOM

The 1980s saw a massive rise in scuba diving's popularity, including a growing number of female divers. During this time, Tokyo dive shops requested a "clear, beautiful mask," as most masks at the time were made of opaque black rubber. In response, Kinugawa Pacific Co., Ltd. developed Japan's first transparent silicone mask, the Mantis Silicone (Clear). Its bright and clear design quickly made it a favorite, especially among female divers.

In 1983, the company launched the Gull brand, specializing in scuba diving equipment. Gull became known for its innovative designs and vibrant colors, which continue to define the brand today.

The Mantis mask line was improved over time using data on changing facial structures to ensure a comfortable fit for both Japanese and international divers. The Mantis III, released in 1986, won Japan's "Good Design Award" for its excellent fit and functionality. Later models, such as the Mantis IV and the Mantis Full Face (designed for breathing without a regulator), also received the prestigious award, further establishing Gull's reputation for quality and innovation.

In 1988, Kinugawa Pacific Co., Ltd. introduced AQA, a brand for families offering snorkeling and water-play equipment. AQA's products combined functionality and fun, featuring quick-drying marine wear

1955

Kinugawa Shoji Co., Ltd. was founded as the sales arm of Kinugawa Rubber Industries' "Underwater Sports Equipment" division.

1967

Kinugawa Rubber Industries acquired the Tateishi Factory and established a manufacturing division for underwater sports equipment under the new name, Kinugawa Pacific Co., Ltd.

1972

Kinugawa Shoji Co., Ltd. was established as a wholesale division for underwater sports equipment.

1983

The diving equipment brand "GULL" was introduced, along with the launch of the iconic Mew fins the following year.

1964

We undertake OEM production of masks and fins for leading overseas brands.

1971

The introduction of "Mantis", a mask, domestically manufactured and tailored to fit Japanese facial features.

1982

Mask Co., Ltd. was established as a retail division specializing in underwater sports equipment.

and colorful designs. The brand also launched collections for kids and juniors, which quickly gained popularity.

Entering 1989, the market for diving fins leaned toward colorful plastic fins from overseas. However, the company remained committed to its rubber manufacturing roots and continued to focus on producing high-quality natural rubber fins. Leveraging advanced material technology and expert craftsmanship, the company improved the performance of rubber fins while expanding their color options, successfully blending functionality with style. This reignited interest in rubber fins, with models like the Mew becoming highly sought after.

2000s THE LAUNCH OF THE REVOLUTIONARY G SERIES

In the 2000s, amid increasing price competition and an influx of low-quality dive gear, Kinugawa stayed true to its commitment to creating high-quality, reliable, and safe products made in Japan.

The company invested in developing advanced models, and in 2006, it introduced the **G Series**, which included the **Mantis LV**, **Super Bullet**, and **Barracuda**.

Despite some doubts about the need for high-end features, Kinugawa's team remained dedicated to producing top-tier products.

In 2008, the company launched the **Mantis 5**, which offered improved visibility and reduced weight.

With the rise of contact lenses, single-lens masks became more popular, and in 2010, **Kinugawa** released the **Vader** a stylish single-lens mask designed to maximize field of view.

In 2015, Mask Co., Ltd (a retail sales division) and Kinugawa Shoji merged to form **Kinugawa Co., Ltd**. The following year, the company introduced the **Vader Fanette**, a smaller version of the Vader mask, at the time, aimed specifically for women.

The G Series continued to grow, with the release of **GT** in 2020, **Mantis LVR** in 2022, and **Luvos** in 2024, further solidifying Kinugawa's leadership in the diving industry.

The **Mantis** celebrated its 50th anniversary in 2022, becoming a legendary favorite among divers. Kinugawa remains dedicated to adapting to the needs of divers, constantly innovating while maintaining its commitment to quality and excellence.

2000s THE EVOLUTION OF THE G SERIES

Amid rising price competition and an influx of low-quality dive gear, Kinugawa upheld its commitment to producing high-quality, reliable, and safe products made in Japan.

In 2006, the revolutionary G Series debuted with models like the Mantis LV, Super Bullet, and Barracuda, setting new industry standards. The stylish single-lens Vader mask followed in 2010, catering to the rise in popularity of single lens masks. In 2016, Kinugawa introduced Vader Fanette, a smaller version of Vader that was tailored specifically for women at the time. The G Series continues to thrive with the GT (2020), Mantis LVR (2022), and Luvos (2024).

In 2008, the company launched the Mantis 5, which offered improved visibility and reduced weight. Celebrating its 50th anniversary in 2022, the Mantis cemented its status as a legendary diver favorite.

Since 1955, throughout changing times to the present, Kinugawa remains committed to innovation, exceptional quality, and addressing the ever-changing needs of divers worldwide.

1989-

Inspired by the unprecedented diving boom following the release of the song "When She Changed into Her Swimsuit," a range of new products was launched, including: Abeam (1989), Bonito (1989), Mantis IV (1990), and Mantis Fin (1994).

2006

The Ultimate in Perfection. The debut of GULL's "G Series" Featuring the release of the "Mantis LV," "Super Bullet," and "Barracuda."

2025

Celebrating 70 years of excellence. Honoring the past and looking forward to an exciting future bringing even more opportunities for everyone to enjoy the ocean.

1988

The "AQA" brand, focused on family-friendly snorkeling products, was launched.

2000

The Mantis Full Face mask was launched and received the Good Design Award.

2015

Kinugawa Shoji Co., Ltd. and Mask Co., Ltd. merge to establish Kinugawa Co., Ltd.

Open View

LUVOS boasts the largest vertical view at 105° amongst Gull masks, and the widest horizontal view at 118° amongst single-lens masks, making it Gull's largest view single-lens mask ever. Rivaling the field of view found in frameless masks.

Comfort-Fit Technology (PATENTED)

Reinforced Damper

Facial movement may compromise a mask's seal causing flooding around the lips. Reinforced dampers keep the skirt's edges securely in place preventing flooding even with substantial facial movement.

Easy-Pinch Nose Pocket

Construction of the nose pocket and surrounding area is altered making it much easier to pinch the nose for improved equalization. Gaps between nose and frame are widened allowing for an easy pinch even when wearing thicker gloves.

3D Leak Guard

Faces tend to create areas around nose and mouth (laugh lines) and do even more so when clenching a snorkel or regulator. The skirt's inner three-dimensional surface is specifically engineered to maintain a locked seal at the laugh lines.

Includes a durable Luvos hard case.

LUVOS

Designed entirely from the ground up, this mask and degree of lens reflection are meticulously engineered with the concept of "bright and expansive vision". Experience exceptional brightness and clarity- a true spectacle.

Volume **125 cc** Weight **223 g**

Even while inheriting the form of the VADER, the low-volume design makes it easier to exhale into the mask for equalization and mask clearing.

Leakless System

Water is most likely to flood the nose and mouth area when gaps open in the seal between mask and skin. This may happen, for example, if the mask rides up on the face, and if leaking occurs at the cheeks when you are adding a mouthpiece or at the the corners of the mouth when you grin underwater. Here, to avoid compromising the seal when your facial muscles move, the mask form is optimized to maintain fit and feel.

ANTI-FOG FILM

FEATURES OF PRODUCT

1. Prevent blemishes effectively with surface Super-hydrophilic.
2. Prevent dust.
3. There are seven types of Gull masks.

ADVICE FOR USERS

1. After use, wash with clean water and wipe with a dustproof fabric.
2. If the film has scratched, it will reduce the effectiveness of the blemishes.
3. Avoid polishing.
4. The film has a year service life but depending on the usage of the user.
5. Avoid folding or bending.

How to apply the ANTI-FOG FILM

- 1. Remove the Mask Frame:**
 - Detach the mask frame from the lens. For detailed instructions, refer to the mask tear-down guide on YouTube: Dive Space.
- 2. Clean the Lens:**
 - Gently wipe the lens with a microfiber cloth to remove any smudges.
 - Use clear tape to pick up and remove any dust particles from the area where the film will be applied.
- 3. Prepare the Film:**
 - Carefully peel off the clear plastic tab from the anti-fog film.
 - Place the film onto the lens, ensuring it is as centered as possible.
- 4. Remove Air Bubbles:**
 - Press out any air bubbles using a microfiber cloth, starting from the center and moving outward.
- 5. Final Inspection:**
 - Peel off the colored plastic tab from the film.
 - Check the lens for any remaining dust or air bubbles, and remove them if necessary.
- 6. Reassemble the Mask:**
 - Align the lens with the designated marking points and reassemble the mask frame.

**HOW TO TEAR DOWN FRAME
& HOW TO INSTALL FILM**

EQUIPMENT

1. Microfiber cloth to wipe glasses
2. Flathead screwdriver
3. Clear tape

UVARIR UV380 AR IR CLEAR LENS

Features of UV AR IR Clear Lens: AR (Anti-Reflection)

Conventional lenses reflect a significant portion of light, resulting in a lower light transmittance of about 92%. UV AR IR Clear lenses have AR coating applied to both sides, enabling over 98% of light to pass through. This ensures a clearer and brighter vision, more akin to the naked eye. Anti-reflection is also an important safety feature, facilitating ease of eye contact when underwater.

*As with other Gull lenses, be sure to use a neutral detergent and use with the pad of your finger for cleaning the lens. Using a sponge may also damage coating.

The lens features an anti-reflective UV380 coating for enhanced transparency compared to UV420 lenses. With anti-reflective (AR) processing on both sides, it ensures clear underwater vision. An added infrared (IR) protective coating helps minimize skin aging around the eyes.

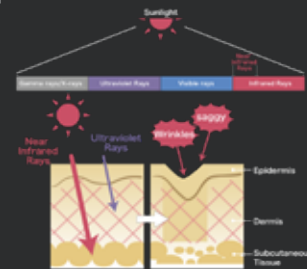

Features of UV AR IR Clear Lens: IR (Infrared Cut) Effect IR (Infrared) Radiation Cutting Technology

Infrared rays penetrate deeper into the skin than ultraviolet rays, leading to wrinkles and sagging. IR cutting technology blocks roughly 50% of IR rays, providing additional anti-aging protection when exposed to strong sunlight, such as on the beach or water surfaces.

What are Infrared Rays? Infrared rays are a type of radiation. While they have lower energy compared to ultraviolet and visible light, they make up about 50% of the sunlight reaching the Earth's

surface. Unlike the stinging sensation experienced with sunburns, infrared rays accumulate damage without any noticeable discomfort, reaching deep into the skin, contributing to wrinkles and sagging.

*Simplified to show how it works.

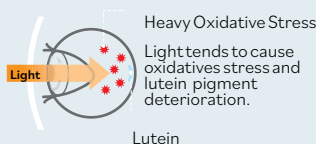

UV420AR CUT LENS

Protects eyes from UV rays (up to 400nm), and HEV light (400-420nm), that contribute to oxidative stress and deterioration of lutein.* AR (Anti-Reflective) feature improve light transmittance for better visibility.

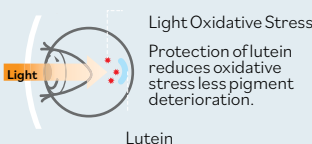

*People say that lutein acts like natural sunglasses. It is present as a pigment in the retina, the crucial part of the eye that receives light and lets you see. Here, helping to prevent cumulative macular degeneration, it blocks harmful light. Its presence in the retina is limited and, because the body can not make lutein, it can only be replaced by eating lutein-rich food.

uv420AR

An eye behind an ordinary lens

An eye protected by a UV420 cut lens

How a tunnel looks with different colored light

Orange light makes objects more visible by increasing the contrast of shadowed edges. White light increases overall visibility. As in the orange-lit tunnel, a UV400 amber lens increase contrast. Meanwhile, a UV420 lens lets everything remain brighter overall.

Super Bullet

Super Bullet

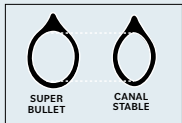

Able to withstand harsh conditions: tough with refined performance Gull's high-spec, top-of-the-line snorkel.

2,300 PRICE THB

Length	405 mm
Volume	180 cc
Weight	186 g.
Inside Diameter	21 mm

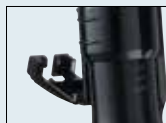

MIR Turquoise

21-mm dia. large bore pipe
The large bore pipe enables high-volume air flow and the smoothest air intake of all the Gull snorkels.

Stabilizer pipet
Sleek, streamlined pipe has less drag. Less drag means less tube shudder and less discomfort from tube shift.

Bullet holder
To easily detach from mask strap, simply squeeze the sides of the clip.

Movable mouthpiece
Freely adjust the angle to easily find the most natural, comfortable position for you.

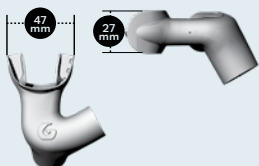

Twin purge valves
With double the usual number of purge valves you can clear water more quickly from the snorkel. After expulsion, by channeling any water that remains into the purge chambers, the design diverts water away from your mouth. Clearing the snorkel is really easy.

Super Bullet Mini

This high-spec snorkel design, which is highly regarded for its excellent air intake and exhaust comes with mini-size mouthpiece to fit women. Now women can snorkel in comfort.

Foot pocket designed to easily expel water

The foot pocket is formed using a thin and pliant rubber material. This makes the fins easy to put on and take off. Even first-time users of full-foot fins can get into and out of these Mew Fins with little effort.

Rib Shape

The ribs on the Mew are designed with the down kick in mind. At this time when power is most easily converted to propulsion, Mew Fins firmly catch the water. Providing pleasing response to strong or subtle kicks, they suit a variety of conditions and are loved by both power divers and occasional divers, who have different leg strengths.

#1) Of fins made by specialist domestic makers, during FY 2017 in diving shops in Japan, Gull rubber fins were the top sellers (inhouse market analysis).

SUPERMEW

6,390 PRICE
THB

This hybrid design delivers speed and instantaneous response to divers who seek power, immediate propulsion, and more feeling.

L	615 x 210 x 87 mm	1,060 g
XL	650 x 210 x 93 mm	1,200 g

Easy turn up

An innovative design using the right materials enables easy fitting: simply turn down the heel section and use your fingers to pull it up. It's easy, even when wearing thick gloves. Because the heel is made from soft, pliant rubber, getting the fins on is no trouble at all. Now, you can enjoy using full-foot fins.

Hybrid rubber delivers even greater propulsion

To enable these fins to powerfully, yet smoothly, deliver tenacious propulsive power, Gull's innovative production methods integrate different pliant and resilient types of rubber for the foot pocket, blade, and ribs.

Ribs designed to firmly catch the water

Making the ribs the same height on the top and bottom of the blade has radically improved rebound performance. A secure, efficient catch while finning, without side planing and blade twist, enables you to powerfully and confidently drive forward on both the down kick and the up kick.

Foot pocket designed to easily expel water

The foot pocket is formed using a thin and pliant rubber material. This makes the fins easy to put on and take off.

Blade tip shaped to catch water

With fins designed to make optimal use of the resilient properties of rubber, firmly catching the water, from the start to the end of the kick cycle, you get solid propulsion.

Long blades

Giving your legs propulsive power even in places with strong water flows, long blades are the outstanding feature of Warp Fins. With Warp, you can extend your range of diving experience.

Hard

Soft

Different colored Warp Fins have different stiffness

● Black ○ White

Stiffness is similar to Hard Mew. These flagship Warp Fins powerfully catch the water and feel wonderful, like an extension of your legs.

● Red ● Yellow ● Caribbean Blue
● Edo Violet ● Easter Green

Stiffness is similar to Mew. These all-round performers are useful for any kind of diving. They are very effective for surface travel and for use as flippers.

SUPERMEW XX

6,490 PRICE
THB

Among strap fins, Super Mew XX is an established name. Now we offer an upgrade that takes dynamic performance to a new level. From a design that dared to shorten the total length and blade length so that any diver can use the fins, on a par with Super Mew XX, you can enjoy ease of use and outstanding propulsion. For use with wet suits or dry suits.

Fin bottoms made for ease of use and safety

Super grip system

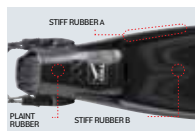

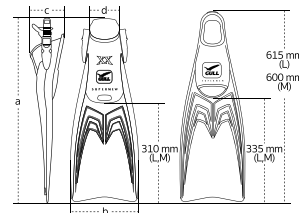

Complementing the all-over thickening of the sole, grip has been improved with a new tread pattern.

Hyper dimple system

Suppressing turbulence, dimples send more kick power into propulsion.

Water-flow smoother system

For more efficient propulsion, water is effectively channeled rearwards rather than to the sides.

Hybrid rubber delivers even greater propulsion

To enable these fins to powerfully, yet smoothly, deliver tenacious

propulsive power, different pliant and resilient types of rubber are used for the foot pocket, blade, and ribs.

Ribs designed to firmly catch the water

Making the ribs the same height on the top and bottom of the blade has radically

improved rebound performance. A secure, efficient catch while finning, without side planing and blade twist, enables you to powerfully and confidently drive forward on both the down kick and the up kick.

Boot pocket designed to fit and easy to get out of the fins

In the boot pocket, along sole and high

instep minimize lateral slippage of the toe end of the boots. An even better fit is possible if you pair them with Gull GS boots, which were designed for use with these fins.

Optimized blade tip line

The end of the blade is shaped to allow water to smoothly escape.

Because the blade rebounds more quickly, throughout your session, you can efficiently keep on kicking.

MEW CYPHER

4,790 PRICE
THB

Inspired by the soft kick of Mew that's loved by divers of all skill levels, from novice to advanced, we have also achieved this feeling in strap fins that are easy to get on and off. What's more, these employ a middle-range blade design for underwater use, achieving both soft fin work and efficient propulsion. These give every diver the exhilaration of full-freedom swimming.

A lightweight and compact design for ease of use both underwater and on entry and exit

With a blade length shorter than ordinary fins, these are designed for ease of use and lighter weight. Under water, the compact design offers agility and less chance of damaging coral or other marine life. These are also easy to get on and off and tote, even when donning gear on land or on a cramped boat, achieving comfortable entry and exit.

Boot pockets that achieve both the outstanding fit of a full-foot design and ease in getting on and off

These feature a boot-pocket design boasting a long sole and high instep that snugly envelops the entire foot. This achieves a fit of outstanding comfort, along

with conveying leg power with the same ease as full-foot fins for unflagging propulsion.

COCO FIN

For women and newcomers to diving, lightweight, compact fins with a comfortable, easy kick. The range of attractive colors also enables total coordination

World Renowned Kinugawa Rubber

Now trusted by divers all around the world, Gull's production history began in the rubber industry as Kinugawa. Kinugawa initially produced rubber automobile parts such as weather strips and other sealants. It wasn't until 1955 when Kinugawa began shifting its focus to exclusively manufacturing diving equipment team.

Natural Rubber:

Unlike synthetic rubber, natural rubber exhibits excellent propulsive force with high elasticity giving Gull fins their signature feel and performance. Natural rubber is also adjustable and can be modified to construct a variety of fins that accommodate to all levels of divers.

Specially shaped ribs

The blade's ribs are extra-high to help eliminate side-slips that can occur with long fins. This helps achieve smooth fin performance. What's more, the resilient properties of the rubber can be used to full advantage to achieve smooth propulsion.

Non-slip performance

Along with the conventional non-slip treatment at the center, the rib also feature a textured non-slip surface. What's more, even the sides use a non-slip design, providing a sure grip for the even when walking on boat decks and rocks.

3D pocket

Firmly hugging the Achilles tendon, the 3D pocket opening has been designed to reduce looseness and to hold your foot just like a sport shoe lets you control your fin like an extension of your foot.

Long blades

Rubber fins boasting the world's longest blade and the propulsion they can achieve because they are Barracuda.

Black

One-Hand Easy Grip Strap
Spring strap is fixed with a finger handle minimizing the hassle of donning and doffing, even when wearing thick gloves.
**Gloves removed in photo to better demonstrate gripping of finger handle*

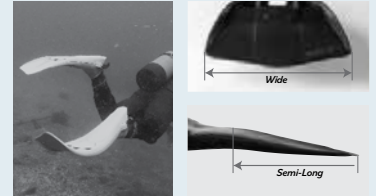

Adjustable Spring for precise Power
Adjustability of up to 4 cm for better fitment and ultimately more reliable powerful propulsion.

Dry Suit Compatible Foot Pocket
GT's dry suit compatible foot pockets are outfitted with large openings allowing for easy wear and removal for almost any drysuit boots to fully be inserted. Grooves on the inside of the pockets help slide your boots in place for a smoother insert.

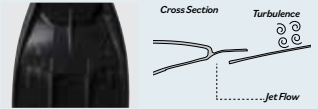

Instant Power

GT offers instantaneous extra torque power when you most need it. Great for diving with a heavy load, battling tough currents, performing quick getaways and aiding incapable divers get to shore safely.

Semi-Long, Wide Blade Stability

The use of our exclusive 100% made in Japan Kinukawa rubber offers flexibility that effectively. Wide transmits the power of your kick to the blade. Compared with other jet style fins, GT's bending point occurs semi long closer to the foot pocket displacing enormous volumes of water with every kick. GT promises monstrous power, all while the jet holes actively work to stabilize the blade.

Jet Hole Stabilizers

As pressurized water exits conventional jet holes, it immediately disperses into the surrounding water. Our patent pending jet hole stabilizers act as a water flow guide, delaying the dispersal of water. This leaves an area of negative water pressure behind the fin allowing your kick to pull out more efficiently.

SCS 1 mm

1mm SCS LONG SLEEVE

Made from 1mm SCS (Super Composite Skin) material, providing outstanding insulation. Its unique trim and use of Ino-Spandex Jersey offer a comfortable fit with less constriction at the chest for relaxed breathing. Wear it under a wetsuit or on its own throughout the year when diving, or engaging in other water activities.

GULL WEIGHT VEST

3,290 PRICE THB

Consists of two front and two rear weight pockets ensuring an even weight distribution and reduces stress at the waist.

Each pocket is able to carry a maximum of 2 kg for a max total weight of 8 kg. The body contact area is padded to cushion against impact ensuring comfort throughout the duration of your dive.

Adjustable Belts

Adjustable belts are fastened to shoulders and sides for proper fitment.

Weight Pockets

Fastened with 4 weight pockets each with a maximum hold of 2 kg for a maximum of 8 kg.

Cushioning

Cushioning on the body side reduces any pain caused by pressure or impact from the weights.

SWIFT

NEXT GENERATION SMART AI TRANSMITTER

The Swift allows divers to carry multiple transmitters reliably. The collision avoidance protocol allows for multiple transmitters to be used at the same time with a lower likelihood of dropped communications. The Swift is designed and built in Canada for demanding divers of all proficiency levels.

TECHNICAL SPEC

- Depth limit: 200msw
- Operating temperature range +4C to +34C
- Short-term (hours) temperature range: -10C to +50C
- Pressure port: 7/16" = 20NF
- Rated air pressure: 300 bar / 4350 psi
- Pressure reporting resolution: 0.14 bar / 2 psi
- HP port proof pressure: 450 bar / 6525 psi
- Accuracy: 5% full scale
- Zero offset: <3.5 bar (50 psi)
- Activation pressure: 7 bar (100 psi)
- De-activation pressure: 3.5 bar (50 psi)
- Cover screws: 1.5mm hex
- Body o-ring: 24x1.5mm
- HP port o-ring: A5568-904 75A

Founded in 1984, Dive Rite is a pioneer in the SCUBA diving equipment industry. Some of Dive Rite's very first products include the first wing solely dedicated for doubles and the first commercially available back plate. Over the years, Dive Rite's product line has continued to grow including: the TransPac, various Wings, Lights, Reels, Nomad Sidemount, the O2ptima CCR, and so much more. Dive Rite also provides an entire range of equipment with the sport diver in mind, such as the Advanced Open Water regulator set and the Hydro Lite BCD. Brand new to diving or a 20 year veteran, Dive Rite has you covered.

TRANSPLATE SET

SUPERFABRIC

FULL SUPERFABRIC PARTIAL SUPERFABRIC

- Antimicrobial
- Flame Resistance
- Durability
- Abrasion Resistance
- Stain Resistance
- Breathability
- Quick Drying
- Slash Resistance
- Easy Cleaning

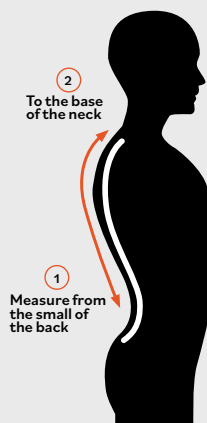

Dive Rite uses SuperFabric® materials to cover buoyancy compensators and provide both abrasion resistance and slash resistance from sharp rock and coral during dives. SuperFabric® materials are used to cover the air bladder of the compensator. A slash in the bladder can lead to serious safety concerns for the diver.

COMPLETE UNIT

Complete Unit with Petrel 3

[Contact us](#)

Complete Unit with Nerd

[Contact us](#)

Technical Details

- Redundant Shearwater DiveCAN electronics including Heads-Up Display (HUD) and Petrel 3 controller (NERD controller is optional)
- Chest mounted counterlungs with 6 Liter total loop volume
- Dual use scrubber canister design can be used with Micropore ExtendAir SR-081C cartridges or packed with 5 lbs of 812 mesh loose granular CO2 absorbent
- Dive Rite DSV standard
- Oxygen Manual Add Valve (MAV) and Automatic Diluent Valve/Diluent Manual Add Valve (ADV/MAV)
- Dual water traps inside the counterlungs and scrubber endcap
- XT1 or FT1 first stage oxygen regulator
- (4) AI R22 Oxygen Sensors
- SuperFabric soft cover for abrasion protection
- 12" (30 cm) loop hoses standard, 10" (25 cm) hoses optional
- Compatible Cylinders (not included): AL 13 (recommended), AL 20, AA LP 27, AA HP 32, AA LP 13
- Compatible with any harness with 2 high shoulder D-rings and 2 hip D-rings. Nomad LS recommended.
- Weight: 14.4lbs without oxygen cylinder or scrubber material

O2PTIMA CCR BMCL & iBOV

MIFLEX HOSES – XTREME PERFORMERS

- Light and extremely flexible.
- A multi-layer construction hose.
- An average longer lifespan than traditional hoses.
- Excellent resistance to abrasion.
- Kink-resistant design – tie an XTREME hose into a knot and air flow remains continuous.
- A burst pressure more than twice that of traditional hoses.
- 30 individual safety tests made during production on every hose.
- Miflex premium packaging which doubles as a water resistant Dry Bag.
- Approved and certified to EN250 with standards exceeding these requirements.
- Miflex hoses are fully recognisable with our name clearly shown on every fitting, as required under EN250 for product traceability.
- We supply directly to a number of the major brands of diving equipment.
- Included with every hose are the official Miflex Manufacturers User Information and Warranty Guide.

XT TECH - TECHNICAL DIVING HOSES

The XT-Tech series of medium pressure flexible scuba diving hoses, have been developed with the main purpose to offer technical divers additional safety with Kevlar reinforcement in the inner braiding, combined with a smooth outer PU layer.

- For Technical Divers
- Lightweight
- Inner core of Polyether based PU
- Smooth Outer Layer
- Kevlar Reinforcement
- Not Positively Buoyant
- Complies with EN250
- Miflex Quality Manufacturing

This new XT-Tech hose configuration from Miflex, as it is not positively buoyant, is particularly appreciated & enables less abrasion around the neck, so allowing the hose to stay in place.
